# Our wireless business services

## Product information about the wireless service options available with VergeTel.

VergeTel Business Wireless allows you to run business critical applications, and experience an ultra-reliable, consistent experience over a secure and scalable network. Our high performing internet solution is powered by one of Australia's largest internet backbones and is delivered over our mixture of fixed wireless and fibre technology. A small dish is installed on your roof which connects to a local VergeTel tower and receives an internet signal.

### Solid technology, clever engineering

We can provide this highly resilient solution for business through the clever use of fibre and fixed wireless technologies. A small dish is installed on your roof which points to our nearest base station tower.

### Low congestion, low latency

Typically, internet service providers run a congestion model which means they oversubscribe the number of customers in comparison to the bandwidth available. This is the main cause for slow speeds. VergeTel runs a low-congestion network, and proactively upgrades equipment to ensure this never happens.

### Awesome support

Our friendly team is locally based in Newcastle, and just a call away to help. We want to see you up and running as fast as possible – and to keep you that way.

### Easy installation

Installation is a quick and easy process for our fixed wireless customers. One of our technicians will install the required equipment and cabling to get you up and running. This includes the modem, radio antenna, wall outlet and internal cabling.

### Static IP Address

All our business wireless services come with a static IP address. This is helpful when you operate a VPN, web server or remote access services.

### Contract duration

You can choose from a 24-mth or 36-mth contract duration. A 36-mth contract includes a free standard installation.

### How to order a service

You can place a pre-order by dropping us a line on **1300 823 034** or email [enterprisedelivery@vergetel.com](mailto:enterprisedelivery@vergetel.com).
